From Lab to Market: Commercialization of Public Sector Technology

The topic of this book, the commercialization of public-sector technology, continues to grow in importance in the United States and similar societies. The issues involved are relevant to many roles including those of policy makers, managers, patent attorneys, licensing agents, and technical staff members of public technology sources. Institutions increasingly involved in the process include federal and other government laboratories and their related agencies, public universities and their state governments, public and private transfer agents and, of course, all the private recipients of public technology. Scarcely a day goes by without a significant event related to technology transfer and commercialization. The popular business press is regularly carrying articles addressing the issues, explaining new initiatives and describing events of notable success or failure.[1] As an example of current important events, the Technology Reinvestment Project (TRP) is formulating its initiatives to transfer public technology and promote technology-based public/private partnerships as a collaboration between the Advanced Research Projects Agency (ARPA), the National Institute of Standards and Technology (NIST), the National Science Foundation (NSF) the National Aeronautics and Space Administration (NASA), and the Department of Energy, Defense Programs (DOE/DP).
