The confluence of cloud computing, parallelism and advanced machine intelligence approaches has created a world in which the optimum knowledge system will usually be architected from the combination of two or more knowledge-generating systems. There is a need, then, to provide a reusable, broadly-applicable set of design patterns to empower the intelligent system architect to take advantage of this opportunity.

This book explains how to design and build intelligent systems that are optimized for changing system requirements (adaptability), optimized for changing system input (robustness), and optimized for one or more other important system parameters (e.g., accuracy, efficiency, cost). It provides an overview of traditional parallel processing which is shown to consist primarily of task and component parallelism; before introducing meta-algorithmic parallelism which is based on combining two or more algorithms, classification engines or other systems.

Key features:

- Explains the entire roadmap for the design, testing, development, refinement, deployment and statistics-driven optimization of building systems for intelligence
- Offers an accessible yet thorough overview of machine intelligence, in addition to having a strong image processing focus
- Contains design patterns for parallelism, especially meta-algorithmic parallelism – simply conveyed, reusable and proven effective that can be readily included in the toolbox of experts in analytics, system architecture, big data, security and many other science and engineering disciplines
- Connects algorithms and analytics to parallelism, thereby illustrating a new way of designing intelligent systems compatible with the tremendous changes in the computing world over the past decade
- Discusses application of the approaches to a wide number of fields; primarily, document understanding, image understanding, biometrics and security printing
- Companion website contains sample code and data sets

Does one one of the book lovers? If so, do you ever feeling doubt if you find yourself in the book store? Aim to pick one book that you never know the inside because don't judge book by its deal with may doesn't work here is difficult job because you are afraid that the inside maybe not since fantastic as in the outside appear likes. Maybe you answer could be Meta-Algorithmics: Patterns for Robust, Low Cost, High Quality Systems why because the excellent cover that make you consider regarding the content will not disappoint a person. The inside or content is actually fantastic as the outside or cover. Your reading 6th sense will directly direct you to pick up this book.

John Cheung:

Within this era which is the greater person or who has ability in doing something more are more valuable than other. Do you want to become among it? It is just simple way to have that.
