This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: ...from Bear Paw Mountains belongs to this species. THE GRACEFUL ANGLE-WING. *Polygonia gracilis*, Grote and Robinson. Butterfly--A small species, rather heavily marked with dark or blackish on the upper side. The wings on the under side are very dark, crossed about the middle by a pale gray or white band, shading off toward the outer margins. This light band serves as a means of easily identifying the species. Expanse, 1.75 inches, 45 mm. Early Stages--Unknown. Distribution--The species has been found on White Mountains in New Hampshire, in Maine, Canada and British America, as far west as Alaska. While the species is recorded as having a western distribution it has not been taken by the writers, in the state, nor is it reported in the other collections. THE SILENUS ANGLE-WING, *polygonia oreas*, var. *silenus*, Edwards. Butterfly--Expanse, 2.2 inches, 56 mm. Primaries moderately incised; slightly dentated; tail long, broad and straight; a prominent dentation between tail and inner angle, which last is much pronounced. Upper side deep red-fulvous, clouded with brown-ferruginous next base of each wing and on disks, and spotted with black, hind margins have a broad cinnamon border of nearly uniform width, black with a ferruginous tint; on the inner side a series of separate, pale fulvous spots, yellowish next apex of primaries, irregular in size, lanceolate; primaries have a large sub-apical ferruginous patch on costal margin, another near inner angle, a broad black spot from costa covering the arc, two oval spot in cell placed transversely and sometimes confluent, two others in first and second median spaces, and a large sub-ovate spot on submedian interspace extending partly over the one next above. Secondaries have the entire costal margin brownish-black, a large ...
