Excerpt from The Supernatural, Vol. 1 of 2: Its Origin, Nature, and Evolution

As the great abstract principles that regulate the interrelations of the various modes of matter and the various forms of life become more and more cognizant to human thought, we become conscious not only of their affinities, but of their representative characteristics. As it is with the organic and the inorganic, so is it with the organic and mental.

Thus in the whole range of organic evolution no essential stage in organic life has ever been lost, special forms have perished, but organisms presenting every important stage in evolution continue still to exist with the same vital attributes that the first beings of their kind, so far as we can judge from paleontological evidence, possessed. Thus we now have representatives of the whole scheme of phylogenic evolution from the incipient exposition of the uncentralized plasmic group through all the ranges of unicellular organisms to the highest organic evolution yet known - man. And while all the classes and orders of living beings still have their representatives, the one continuous unity of all life is still expressed by every organism in its ontological development, passing through the same essential stages as in ages past marked the evolution of its ancestors.
