John N. Hatzopoulos

Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) John N. Hatzopoulos

This book is addressed to students and professionals and it is aimed to cover as much as possible the wider region of topographic mapping as it has been evolved into a modern field called geospatial information science and technology. More emphasis is given to the use of scientific methods and tools that are materialised in algorithms and software and produce practical results. For this reason beyond the written material there are also many educational and professional software programs written by the author to comprehend the individual methodologies which are developed. Target of this book is to provide the people who work in fields of applications of topographic mapping (environment, geology, geography, cartography, engineering, geotechnical, agriculture, forestry, etc.) a source of knowledge for the wider region so that to help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to professionals and evaluating such contracting results. It is also aimed to be a reference of theory and practice for the professionals in Topographic Mapping. This book applies a didactics method where with a relatively small effort someone can digest a quite large volume of simple or complicated material of knowledge at a desirable scientific depth within a relative short time interval. The objective that educated people must be "smarter than the machine" and not to treat the machine as a "black box" being "button pushers" has been achieved, through the author's experience in USA and Greece, with relative success by adopting this didactics technique. There are 11 chapters and two Appendices including: Reference systems and Projections, Topographic instruments and Geometry of coordinates, Conventional construction of a topographic map, Design and reproduction of a thematic map, Digital Topographic mapping - GIS, Digital Terrain Models (DTM / DEM), GPS, methods of Photogrammetry, Remote Sensing, new technologies LIDAR, IFSAR, the method of Least Squares adjustment, Description of educational software accompanying the text.

From reader reviews:

Quincy Eddy:

Hey guys, do you wish to find a new book to study? Maybe the book with the headline Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) suitable to you? Typically the book was written by a well-known writer in this era. The book titled Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) is the main one of several books in which everyone reads now. That book has inspired many men and women in the world. When you read this publication you will enter the new dimension that you never knew prior to. The author explained their plan in a simple way, thus all of people can easily comprehend the core of this guide. This book will give you a great deal of information about this world now. To help you see the represented of the world within this book.

Frances Barrett:

Reading a book can be one of a lot of tasks that everyone in the world really likes. Do you like reading books so. There are a lot of reasons why people like it. First reading a publication will give you a lot of new information. When you read a review you will get new information mainly because a book is one of numerous ways to share the information as well as their idea. Second, reading through a book will make a person more imaginative. When you look at a book especially a hype book the author will bring one to imagine the story how the people do it anything. Third, you could share your knowledge to other individuals. When you read this Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T), you could tell your family, friends in addition to soon about your publication. Your knowledge can inspire the mediocre, make them read a publication.

Cruz Fleury:

Besides that Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) in your phone, it could possibly give you a way to get nearer to the new knowledge or details. The information and the knowledge you may get here is fresh from the oven so don't possibly be worried if you feel like an aged person lives in a narrow community. It is a good thing to have Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) because this book offers for your requirements readable information. Do you at times have a book but you would not get what it's all about. Oh come on, that will happen if you have this in the hand. The enjoyable set up here cannot be questionable, including treasuring beautiful islands. Techniques you still want to miss that? Find this book in addition to read it from right now!

Connie Curtis:

E-book is one of the sources of knowledge. We can add our know-how from it. Not only for students but native or citizens want books to know the revised information of year to be able to year. As we know those

publications have many advantages. Beside most of us add our knowledge, can also bring us to around the world. Through the book Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) we can get more advantage. Don't you to definitely be creative people? To get creative person must want to read a book. Simply choose the best book that acceptable with your aim. Don't always be doubt to change your life at this time book Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T). You can more desirable than now.
