## Building (in) the Future: Recasting Labor in Architecture

There is no denying the transformational role of the computer in the evolution of contemporary architectural practice. But does this techno-determinist account tell the whole story? Are humans becoming irrelevant to the overall development of the built environment? *Building (in) the Future* confronts these important questions by examining the fundamental human relationships that characterize contemporary design and construction. Thirty-four contributors including designers, engineers, fabricators, contractors, construction managers, planners, and scholars examine how contemporary practices of production are reshaping the design/construction process.

Through observations, arguments, and detailed project explorations contributors describe new models of practice and reorganizations of labor for the 21st century. Chapters include a reconsideration of craft in light of digital fabrication; an exploration of new methods of collaboration; an analysis of changes in contracts and standards; and an assessment of the new market realities of mass production and customization.
