Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments Fei Hu, Sunil Kumar

With nearly 7 billion mobile phone subscriptions worldwide, mobility and computing have become pervasive in our society and business. Moreover, new mobile multimedia communication services are challenging telecommunication operators. To support the significant increase in multimedia traffic?especially video?over wireless networks, new technological infrastructure must be created. Cognitive Radio Networks (CRNs) are widely regarded as one of the most promising technologies for future wireless communications. This book explains how to efficiently deliver video, audio, and other data over CRNs.

Covering advanced algorithms, protocols, and hardware-/software-based experiments, this book describes how to encode video in a prioritized way to send to dynamic radio links. It discusses different FEC codes for video reliability and explains how different machine learning algorithms can be used for video quality control. It also explains how to use readily available software tools to build a CRN simulation model.

This book explains both theoretical and experimental designs. It describes how universal software radio peripheral (USRP) boards can be used for real-time, high-resolution video transmission. It also discusses how a USRP board can sense the spectrum dynamics and how it can be controlled by GNU Radio software. A separate chapter discusses how the network simulator ns-2 can be used to build a simulated CRN platform.

From reader reviews:

Vera Forde:

Here thing why this specific Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments are different and reliable to be yours. First of all reading a book is good nonetheless it depends in the content from it which is the content is as tasty as food or not. Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments giving you information deeper as different ways, you can find any e-book out there but there is no book that similar with Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments. It gives you thrill reading through journey, its open up your current eyes about the thing that will happened in the world which is possibly can be happened around you. It is possible to bring everywhere like in recreation area, café, or even in your technique home by train. For anyone who is having difficulties in bringing the paper book maybe the form of Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments in e-book can be your alternate.

Bobby McCabe:

Nowadays reading books become more than want or need but also turn into a life style. This reading habit give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book that improve your knowledge and information. The info you get based on what kind of publication you read, if you want have more knowledge just go with education books but if you want really feel happy read one along with theme for entertaining including comic or novel. Typically the Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments is kind of book which is giving the reader unforeseen experience.

Nola Schroeder:

The book untitled Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments contain a lot of information on that. The writer explains her idea with easy approach. The language is very straightforward all the people, so do not really worry, you can easy to read this. The book was published by famous author. The author gives you in the new period of literary works. It is easy to read this book because you can keep reading your smart phone, or program, so you can read the book inside anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site and order it. Have a nice learn.

James Goldman:

As a student exactly feel bored for you to reading. If their teacher requested them to go to the library or even make summary for some e-book, they are complained. Just small students that has reading's soul or real their passion. They just do what the professor want, like asked to the library. They go to there but nothing reading very seriously. Any students feel that studying is not important, boring and can't see colorful photos on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this time, many ways

to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. So , this Multimedia over Cognitive Radio Networks: Algorithms, Protocols, and Experiments can make you really feel more interested to read.
