**Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics)** David W. Hosmer, Stanley Lemeshow, Susanne May  
**THE MOST PRACTICAL, UP-TO-DATE GUIDE TO MODELLING AND ANALYZING TIME-TO-EVENT DATA—NOW IN A VALUABLE NEW EDITION**

Since publication of the first edition nearly a decade ago, analyses using time-to-event methods have increase considerably in all areas of scientific inquiry mainly as a result of model-building methods available in modern statistical software packages. However, there has been minimal coverage in the available literature to9 guide researchers, practitioners, and students who wish to apply these methods to health-related areas of study. Applied Survival Analysis, Second Edition provides a comprehensive and up-to-date introduction to regression modeling for time-to-event data in medical, epidemiological, biostatistical, and other health-related research.

This book places a unique emphasis on the practical and contemporary applications of regression modeling rather than the mathematical theory. It offers a clear and accessible presentation of modern modeling techniques supplemented with real-world examples and case studies. Key topics covered include: variable selection, identification of the scale of continuous covariates, the role of interactions in the model, assessment of fit and model assumptions, regression diagnostics, recurrent event models, frailty models, additive models, competing risk models, and missing data.

Features of the Second Edition include:

- Expanded coverage of interactions and the covariate-adjusted survival functions
- The use of the Worcester Heart Attack Study as the main modeling data set for illustrating discussed concepts and techniques
- New discussion of variable selection with multivariable fractional polynomials
- Further exploration of time-varying covariates, complex with examples
- Additional treatment of the exponential, Weibull, and log-logistic parametric regression models
- Increased emphasis on interpreting and using results as well as utilizing multiple imputation methods to analyze data with missing values
- New examples and exercises at the end of each chapter

Analyses throughout the text are performed using Stata® Version 9, and an accompanying FTP site contains the data sets used in the book. Applied Survival Analysis, Second Edition is an ideal book for graduate-level courses in biostatistics, statistics, and epidemiologic methods. It also serves as a valuable reference for practitioners and researchers in any health-related field or for professionals in insurance and government.

**From reader reviews:**

**Jesus Gilbert:**

Have you spare time for a day? What do you do when you have considerably more or little spare time? That's why, you can choose the suitable activity for spend your time. Any person spent their very own spare time to take a walk, shopping, or went to often the Mall. How about open as well as read a book called Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics)? Maybe it is being best activity for you. You realize beside you can spend your time along with your favorite's book, you can cleverer than before. Do you agree with the opinion or you have other opinion?

**Larry Turner:**

This Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics) are usually reliable for you who want to certainly be a successful person, why. The key reason why of this Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics) can be among the great books you must have is giving you more than just simple looking at food but feed you actually with information that possibly will shock your previous knowledge. This book is actually handy, you can bring it all over the place and whenever your conditions in the e-book and printed people. Beside that this Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics) forcing you to have an enormous of experience such as rich vocabulary, giving you trial run of critical thinking that we understand it useful in your day action. So , let's have it and luxuriate in reading.

**Wanda Pence:**

People live in this new day of lifestyle always attempt to and must have the spare time or they will get great deal of stress from both way of life and work. So , if we ask do people have time, we will say absolutely of course. People is human not really a huge robot. Then we request again, what kind of activity are you experiencing when the spare time coming to you actually of course your answer will unlimited right. Then ever try this one, reading guides. It can be your alternative within spending your spare time, often the book you have read is usually Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics).

**Brooke Lambeth:**

Beside this particular Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics) in your phone, it might give you a way to get nearer to the new knowledge or information. The information and the knowledge you will got here is fresh from your oven so don't be worry if you feel like an old people live in narrow town. It is good thing to have Applied Survival Analysis: Regression Modeling of Time to Event Data (Wiley Series in Probability and Statistics) because this book offers for your requirements readable information. Do you sometimes have book but you rarely get what it's

interesting features of. Oh come on, that wil happen if you have this with your hand. The Enjoyable set up here cannot be questionable, like treasuring beautiful island. Techniques you still want to miss it? Find this book and read it from right now!
